Re: TVI

Dear Mr. Edelstein:

I have used TVI version 1.2 for about two weeks now and am quite happy with it. I am glad to have basic VI functionality in a Windows-compatible application, and am therefore forwarding the registration fee for the program. I would prefer to receive program updates from you on 3.5" floppies. I don't need the source code.

I would like to mention the following comments on version 1.2:

+ I really like how you handle the :wq combination; I didn't notice it the first few times, but it's a big help;
- I miss the following commands a lot:
  ~ for case swapping
  - for moving to the beginning of the previous line
  ' ' for moving one character forward
  :set wrapmargin=n or :set wm=n for setting margins.

Thanks again for making TVI available as shareware. I hope you will continue to develop it.

Yours truly,

David P. Steele, Ph.D.
