REM
REM     D. P. Steele, 11 August 1993
REM   Modified, D. P. Steele, 12 January 1994
REM   Modified, D. P. Steele, 14 Sept. 1994, to delete the backup
REM         log generated by NovaBack, after copying the log to
REM         C:\IMAGES\LOG.  This command was formerly commented
REM         out.
REM
REM     This batch file does the following:
REM   gets the backup log file generated from yesterday's backup,
REM     disables C:\UTILS\RTIME254\RIGHTIME.EXE,
REM     calls BKP (the NovaStor command-line executable backup utility)
REM       to backup the last 24 hours worth of Polar Camera data and logs,
REM     and then reenables RIGHTIME.
REM     Unfortunately there is no way to know which backup set on the tape
REM     is being written, so automatic verification of the backup set is
REM     impossible.
REM
REM   Modified 20 Sept 1994 by D P Steele: now copies KI-generated
REM   quick-look file from C:\ to C:\IMAGES\LOG so it'll get backed up.
